

EDITO

Our commitment to clean technology in France and around the world

Explosions like the one that took place in the factory in Rouen (France) classified SEVESO are threats to our environment and our health. And yet, they could be avoided.

In the long run, the solution would be to lay the foundations for an environmentally friendly construction. The importance of materials and coatings used makes perfect sense. In the case of such high-risk sites, the non-flammability of the coatings would prevent this type of accident. Whether in nuclear power or in sensitive areas such as the oil field, the recommended coating becomes essential. Safety is ensured with liquid waterproofing systems approved for fire B - s2 d0.

The liquid sealing system proposed with solvent-free SOUPLETHANE 5 COR FRB (M1) resin and Bisphenol A corresponds to this type of coating that can be prescribed. Corrosion protection (from 1 to 14 pH) in the chemical, pharmaceutical, agricultural and sewage treatment plants, it is also easily decontaminated. In the same concern for health safety, it can also be applied in public facilities, such as hospitals and nursing homes, or shopping centers and stadiums.

We can participate in improving our day-to-day environment and expect to be a part of it.

René MASSARD

We are pleased to announce you the renewal of our CEFRI certification for radiation protection management.

KEMISTATIC

Kemistatic will open the 2K PU resins field of applications.

One example : The protection of external woodworks

Wood constructions face a lot of aggressive sources into the environment : fungal infection, insects, UV, humidity, temperature variations, ...

Kemistatic will allow the use of our resins to protect external woodworks : doors, windows, terrace, cladding, ...

. We want to offer to external woodworks a full protection thanks to the high technical performances of our resins : durability, strong adhesion, waterproofness.

From October 22 to October 24
(Presence of our Russian partner C-Plus)

From November 2 to November 4
(Hall 6 - Secteur 16 Etanchéité - Stand D148)

From November 6 to November 8

On November 28, in Lyon

SOME PICTURES OF OUR **LAST** **PROJECTS**

Wall and floor, Souplethane 5/6 Putty

Floor, wall and ceiling, Souplethane 5, PU Aqueux

Green roof
